

ENF Internship

We are a fast growing Renewable Energy information company based in China, running the world's most popular Solar website; we also publish Market Research reports, manage broker services via our Trade department and boost Solar jobs through our Jobsite! Visit us at <http://www.ensolar.com> to learn more about us.

We're expanding our structure, for this reason we are keen on recruiting new staff to grow talents internally. Positions are available in a number of functions like **HR**, **Market Research**, **Sales** and **Jobsite**. The internship will run for 6 months and successful candidates will be offered a permanent position.

ENF will provide accommodation within a shared apartment with other ENF employees. The internship is an un-paid assignment with an opportunity to gain extensive knowledge in the industry and experience in real China, as we're based in **Wuhu**, Anhui.

Typical requirements are:

- Fluency in English – Please do not apply if your English is not very good
- Graduated in Business, HR or Renewable Energies fields.
- Fluency in one of the following languages – French, Spanish, Italian, German, Japanese, Korean, Chinese

It is important for us that our new team members are stable and happy, so we would like to point out a few potential negatives to potential candidates:

- There is little night life and bars in the city: people who love to hit the town will be disappointed with the social options.
- We are based in real China: unlike Beijing and Shanghai, there are very few foreigners in Wuhu so if you just want to hang around with Europeans only there won't be much choice.

On the positive side the city is well developed and clean: there are global supermarket chains in the city and large department stores which make shopping easy. Living expenses are 1000-1500 rmb (100-150 euros) per month.

To apply for this job, please email mr2011@ensolar.com!
